Education

Bachelor of Science in Computer Science

Phuket Rajabhat University
Jun 2020 – Mar 2024

- Faculty of Science and Technology

skills

Key Skills

- Backend Development
- REST API Development
- API Design
- Database Design
- Authentication & Authorization
- Integration Testing
- System Troubleshooting

Technical Skills

- TypeScript & JavaScript
- Node.js & Express.js & React.js
- PostgreSQL
- Jest & Supertest
- Git & GitHub
- Postman & Railway & Vercel
- Google Apps Script
- AI-Assisted Development
- GitHub Actions

Language Skills

- Thai: Native
- English: Intermediate

LAPHAT RONGRUANGKUL

About Me

Software Engineer with a Computer Science background and 2+ years of professional experience building automation systems, data pipelines, and business tooling. Recently transitioned into full-stack web development – designed and shipped a production Lead Management system end-to-end, covering a Node.js/Express/PostgreSQL API and a React/TypeScript frontend deployed on Render and Vercel. Fast learner who actively explores new technologies and applies AI pragmatically throughout development.

PROJECT EXPERIENCE

Lead Management Dashboard (React Frontend)

Personal Project | Jul 2026

- Built a React + TypeScript SPA consuming the Lead Management API with JWT authentication
- Implemented protected routes, token persistence via localStorage, and role-based UI rendering
- Integrated POST/PATCH mutations with state-keyed re-fetch pattern using custom hooks
- Deployed frontend on Vercel with environment-based API URL configuration

Tech Stack: React, TypeScript, React Router v6, Vite, Vercel

Live URL: <https://lead-frontend-jade.vercel.app>

Lead Management API

Personal Project | May 2026 – Jun 2026

- Developed a REST API by translating real-world lead management workflows into a PostgreSQL application.
- Implemented JWT authentication and RBAC to secure user access and operations.
- Engineered transaction-based assignment logic to prevent concurrent ownership conflicts.
- Designed audit logging to track lead ownership changes and user activities.
- Built integration tests covering authentication, authorization, and business workflows.
- Deployed the application on Railway and documented architecture decisions and trade-offs

Tech Stack: TypeScript, Node.js, Express.js, PostgreSQL, JWT, bcrypt, Jest, Supertest, Railway

WORK EXPERIENCE

Analytics and Marketing Technology Specialist

ForeToday Digital Marketing Agency | Mar 2024 – May 2026

- Designed data-driven systems for onboarding, reporting, and operational workflows, improving process visibility.
- Built a client onboarding monitoring system, enabling real-time project tracking and reducing manual work.
- Engineered a multi-tenant ETL pipeline integrating data from seven platforms for 150+ client accounts.
- Resolved a critical data loss issue by automating reporting processes with Google Apps Script.
- Implemented conversion tracking across 10+ websites, improving data accuracy and reporting quality.
- Collaborated with cross-functional teams to deliver scalable solutions aligned with business needs.
